

WA Exam Papers uses Equation in MS Word to edit and format math equations, matrices, vectors, variables, etc, in our papers.

Equation

All variables, equations, expressions, matrices, vectors and so on in our papers can be edited using the Equation ribbon that can be found in Word:

Equation in Word has a few issues that can be frustrating for new users:

- There is no choice of fonts - Cambria Math is the only option.
- Some parts of in-line equations may display smaller than is preferable. It is possible to change the font size of the whole equation, but not individual parts.

If you are new to using Equation in Word, here are a few quick tips:

- To edit an equation in one of our exams, simply click into the equation and start editing.
- To insert a new equation from scratch, place the cursor where you want the equation, hold down the Alt key and tap = to open the ribbon and display an equation entry box:

Here are some websites with a wealth of useful tips:
